# MESA SiFab Pre-Gown Room

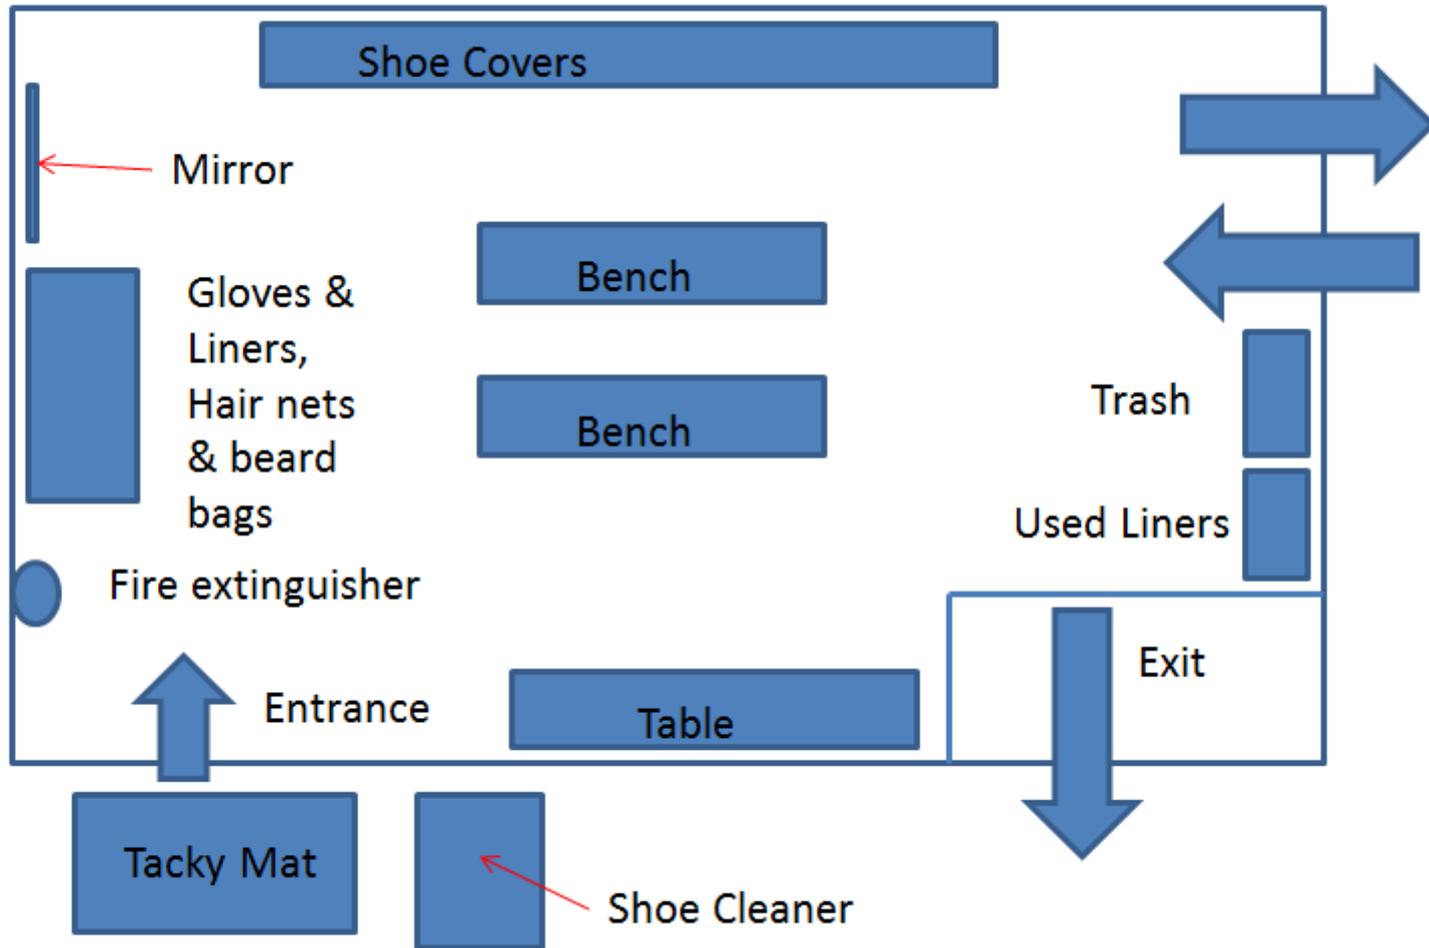

Mike Olewine, Org 01747

- Re-usable laundered shoe covers were in use for many years as a cost savings measure.
- However, the purpose of shoe covers is to keep floors clean ...

After a single use these shoe covers were contaminated with hair.

# Pre-Gown Room: Old Configuration

The shoe clean produces a huge cloud of dirt that will get on your clothes.

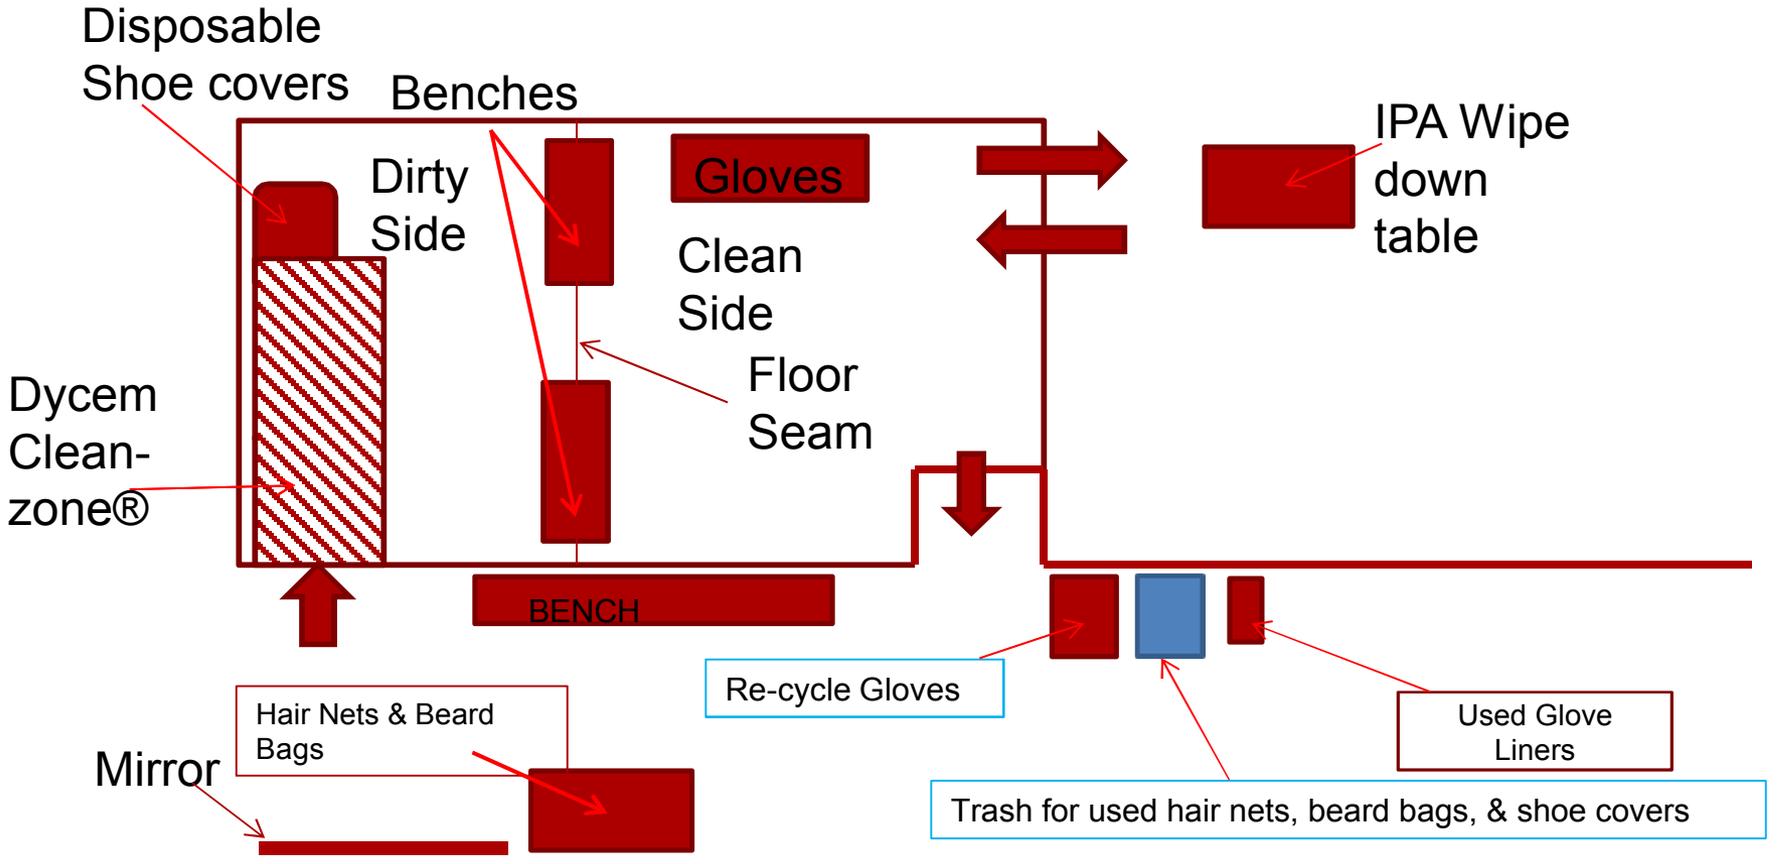

# Pre-Gowning: Before

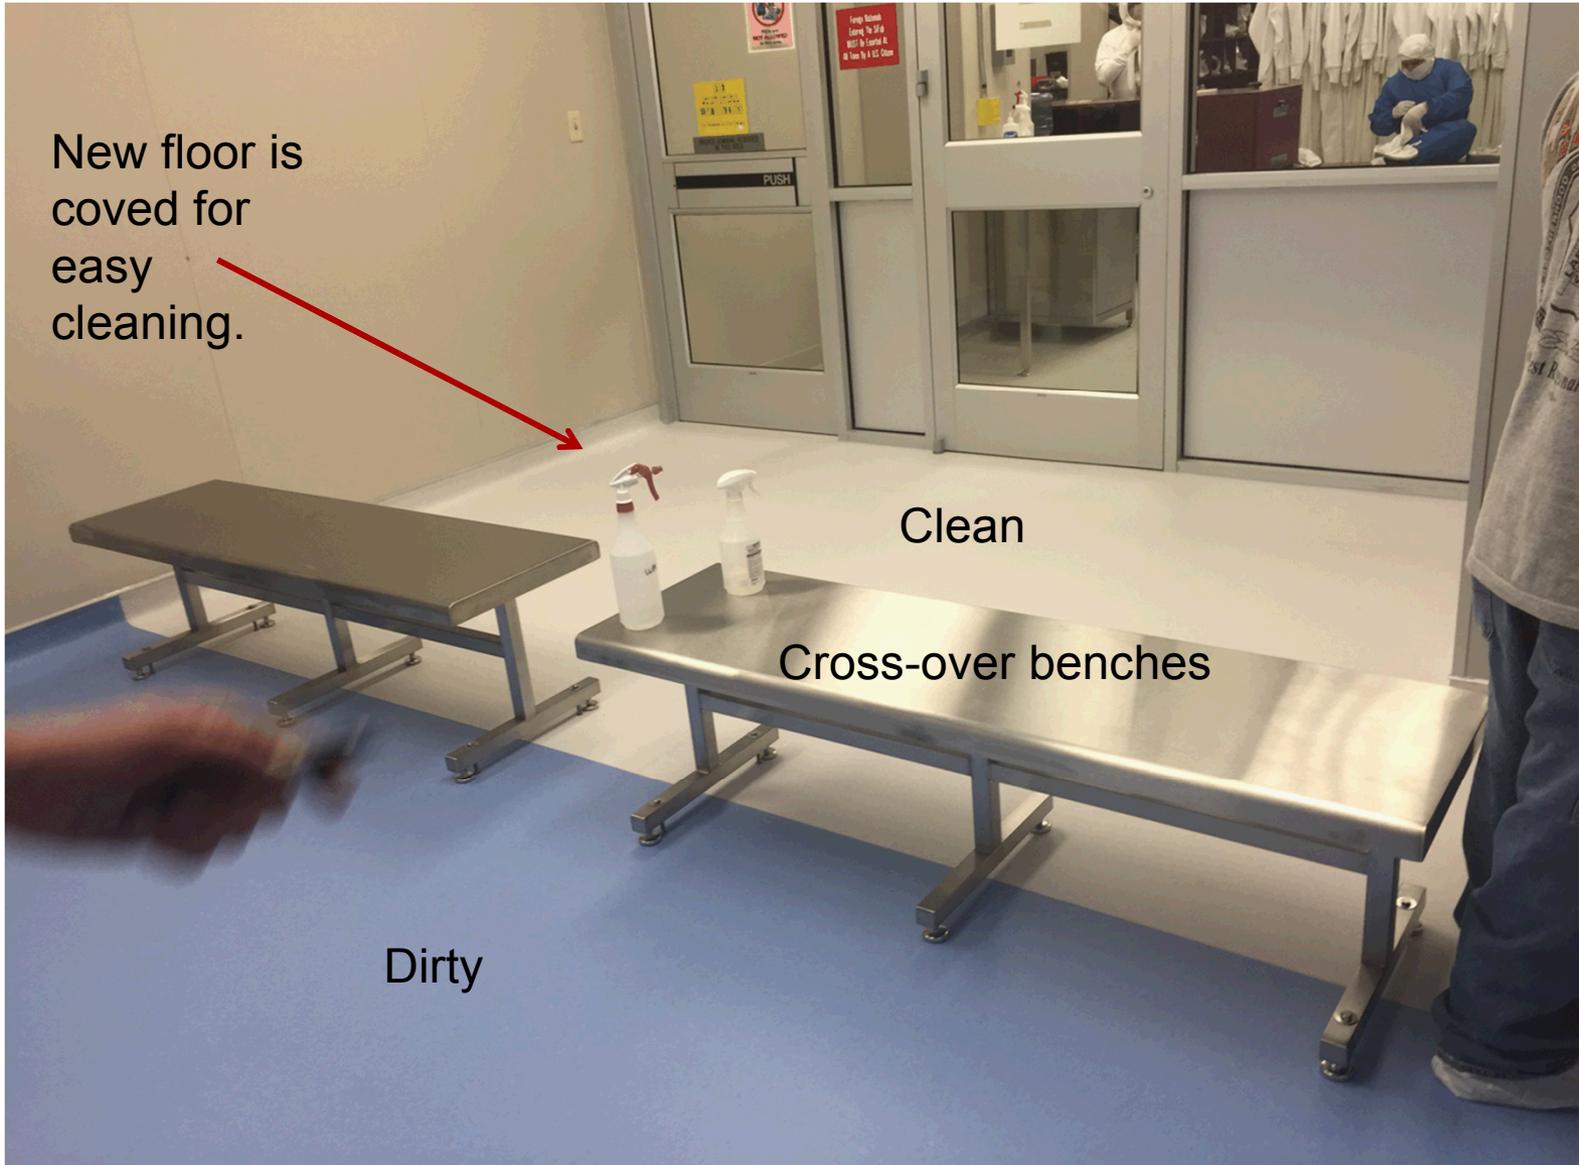

The floor is not segregated into clean & dirty areas. Storing shoe covers is a problem.

A floor buff tool has worn away the covering to expose concrete.

# Revised Configuration

# Pre-Gown Room Construction

# Conclusions:

- Disposable shoe covers and use of a cross-over bench is the best way to ensure floors stay clean between regular cleanings.
- Hairnet donning and removal done in a separate area prevents hair contamination in the gown area.
